---

I am a Rubyist, an experienced SRE, Technical Team Lead, and cloud-based solution developer within the SmartHome IoT technology space, telecoms, finance, gaming and medical industries. I have recent experience in CV and ML model training and tuning using LoRA to freeze base weights and a graphdb to improve inference performance.

---

## PROFESSIONAL EXPERIENCE

### Key Roles

- **2025 - 2026:** Scalpel Ltd – Senior DevOps Engineer  
Providing tooling, AWS expertise and Cloud domain expertise designing hybrid ML model training.
- **2024 - 2025:** Zilch Technology – Senior Platform Engineer  
Responsible for ensuring AWS services are optimized and running.
- **2023 - 2024:** DevOps Engineer Supermassive Games Focused on automation of game asset delivery, package distribution, and build tooling across AWS, GCP and Azure.
- **2019 - 2022:** Tech Lead for SRE/DevOps, IoT Cloud Engineering Team  
Provided technical direction and SME support for Hive platforms deployed in production and staging.
- **2018 - 2019:** SRE and DevOps Engineer  
Developed systems to monitor platform performance, ensure uptime, automate rollouts, and monitor costs.
- **2017 - 2018:** Platform Software Developer  
Designed and implemented components for various service platforms.
- **2015 - 2017:** Deployment Engineer  
Developed components for a Ruby-based configuration and orchestration system.

- **2000 - 2015:** Senior Consultant  
Specialized in telephony switch provisioning, mediation and billing & database administration.
  - **1995 - 2000:** Web Developer  
Focused on integrating legacy systems with websites to create dynamic, online applications.
- 

## TECHNICAL SKILLS

- DevOps / SRE Technical Team Lead
  - AWS, GCP
  - Kubernetes, GitOps, K3s, Docker, Docker-Compose, Docker-Swarm, Vagrant
  - Portainer, K9s
  - Linux / Unix Administration, customisation and deployment
  - Ruby, Rails, Sinatra, Kotlin, Java, Python, Perl, C, Shell, Expect
  - SQL, NoSQL, Oracle, MySQL, Postgres, ElasticSearch, DynamoDB, Redis, AuroraDb, Neo4J (Graph DB)
  - Jira, PagerDuty
  - Agile, Scrum, Kanban
  - Kafka, RabbitMQ, MQTT, Mosquitto
  - IaC: Puppet, Chef, Ansible, Terraform
  - Monitoring: Wavefront, CloudWatch, Grafana, Kibana, DataDog
- 

## WORK HISTORY

**Scalpel Limited, London UK (06/2025 - 01/2026)**

### Senior DevOps Engineer

- Research and evaluate recent AI technologies to improve model training and performance
- Creation and provision of specialised LLM development environments
- Design and automate AWS infrastructure provisioning
- development of bespoke linux distro
- designing and integrating Terraform IaC Management + GitOps
- providing cloud domain expertise to improve ML model training
- linux administration

**Zilch Technology, London UK (08/2024 - 03/2025)**

**Senior Platform Engineer**

- Maintain AWS infrastructure
- managed services via Kubernetes
- last line of support to ensure critical financial services are always up and running
- Terraform development to manage AWS Infrastructure
- linux development and administration
- support for maintaining External promotion asset distribution

**Supermassive Games, Guildford, UK (03/2023 – 04/2024)**

**DevOps, LiveOps**

- Transitioned traditional AAA game development to cloud-based LiveOps.
  - Designed and implemented CDN mirroring on Fastly's Edge to enhance performance and reduce costs.
  - Created infrastructure for containerized game servers using K8s and Thudernetes.
  - Automated asset mirroring, package distribution, and other processes.
  - Linux administration
  - EC2 linux instance configuration via GitOps
  - Kubernetes configuration management vi GitOps and Flux to support AWS, GCP and Azure hosting.
  - Created Unreal MacOS buid tooling
- 

**Centrica Hive, London, UK (07/2015 – 05/2022)**

**SRE Technical Lead, DevOps**

- Developed Ruby-based deployment and orchestration systems for AWS.
- Developed multi-cloud service provisioning for AWS + GCP.
- Implemented Kafka messaging architecture.
- Built cost-monitoring tools and enhanced platform security.
- Created Docker images for integration testing.
- Ansible and Puppet based IaC
- Created build pipelines using github actions, Teamcity, AWS tooling
- Linux administration and kernel mods to support Java devs

- Observability using Wavefront, Cloudwatch, Kibana with Elastic Search (+ Lua development)

---

**Cartesian, London, UK (05/2000 – 06/2015)**

**Senior Consultant**

**Highlights:**

- Automated infrastructure provisioning with AWS and custom Ruby/Python scripts.
- Designed modular OO Perl frameworks for billing assurance.
- Delivered mediation system migrations and training across various clients.
- Oracle database administration and migration
- Managed linux systems for optimised performance

**Client Engagements:**

- **The Cloud:** Developed internal, virtualized infrastructure using Chef and Ruby.
- **SKY (UK/Ireland):** Automated call generation using BluGem and Perl. Oracle DBA.
- **Virgin Media, ntl, Telewest:** Developed telephony switch data extraction software using Perl::Expect.
- **Base Telecom** (Brussels) : Oracle database migration and reverse engineering of CRM .
- **Vodafone Ireland** : in situ replacement of Mediation systems
- **IBM Hursley Park** : SME for mediation system switch for O2
- Linux administration and product deployment using Chef, Puppet and Ansible

---

**EDUCATION**

**University of California San Diego**

*1984-1990*

**Degree:** Microbiology & Biochemistry (Emphasis on bioinformatics)

**Minor:** Music

---

## INTERESTS

- Rugby enthusiast and former Southwark Tigers RFC coach.
  - Passionate about open-source software and SmartHome integration projects.
  - Enthusiastic cook and reader of books such as *Catch-22*, *Snowcrash*, and *Cryptonomicon*.
-
